Society Key is a new, unique, 6-digit, alphabetical code that provides unified and simplified access to navigational tools. The company key is used as a shortcut for financial coding and transaction entry. The key of the society will be used in the following NavTools systems: NetSuite, ACS Marketplace, Salesforce, Concur, Batching Donation Society, ADP, and Nexus Work. Segments that compile a key society include a combination of any of the following values: Subsidiary, Region, Department, Product/Product Instance, Association, and Limitation. If a user doesn't know his society key, they can use the Smart Key Search tool (SKSS). The SKSS tool will be readily available from the Fast Link menu to the source of the society, and most navigation tool systems will also provide a link. There will be a link to the SKSS tool in NetSuite, Salesforce, ACS Marketplace, Concur, Society Donations Packaging, and Nexus Work. You can also click the Key Smart Search Society (SKSS) above. Most of the Company's Keys will already be created. We recommend that you use the Smart Search tool to help you find Society Keys that fit your financial coding. If you want to create a community key, please follow the recommendations below: key public queries related to new revenue related to events, campaigns or opportunities should be submitted to Salesforce by creating a general information case. For income requests that are not related to an existing event, campaign, or opportunity to Salesforces, the request must be sent through Help? in the Intelligent Search Tool Society Key. New Costs Linked to The Key Community Present Through Help? Function in the Society Of Key Smart Search Tool. We have set up additional fundraising networks for the Keys Society and campaigns to help ensure we properly reflect how we receive donations. Now we have the keys and campaigns that include associations. You'll find regional keys and RFL and MSB campaigns, as well as keys and Area CVC campaigns. As you already know, we have created area keys and campaigns to support a fundraising network without association, as well as a regional key and campaign to support Daffodil fundraisers. Salesforce How to encode SEG activities, team fundraisers, and event fundraising Fast Handbook not update: External ID Society Keys have a question or concern that can not be answered by self-service or information above? Send this form and someone will be in touch with you. ThoughtCo uses cookies to give you a great user experience. Using ThoughtCo, you accept our use of cookies. You can tell just by looking at them that the 6th generation iPod Nano is a major change from its predecessor, the 5th generation iPod Nano. Model 6 is a small square with no buttons on your face the size of a matchbook. On the other hand, the 5th generation nano is a more traditional form of iPod nano: tall and thin, with a screen on top and a Clickwheel controller underneath. Apple Discontinues iPod Nano Nano July 27, 2017. Just looking at the two models doesn't really show what makes them different other than their shape. And you have to understand these differences if you want to make sure that you are buying the right model. This article explains the 5 main differences between the two models that will help you decide what's right for you. 7th gen. The iPod nano has replaced both the 5th and 6th Gen models and provides all sorts of significant improvements. If you are thinking of buying a nano, check out this model. Lubyanka/Wikimedia Commons With two models are so different in shape. It is not surprising that they differ in terms of weight and size. Here's how these differences add up: Sizes of the 6th generation nano: 1.48 high x 1.61 wide x 0.74 thick 5th generation nano: 3.6 high x 1.5 wide x 0.24 thick 6th generation nano: 0.74 ounces 5th generation nano: 1.28 ounces smaller and lighter may not necessarily be better though. The 6th generation iPod Nano is great if you want to wear it during exercise, but its small size can make it easier to lose. The 5th generation nano can be easier to hold and track. Apple iPod Nano 16GB 6th generation. Since the body shapes of the two models are different, screens are of different sizes, too. While the 5th generation iPod Nano has both a screen and a Clickwheel on its front, the 6th generation nano is all screen. Screen size (measured diagonally) nano 6th generation: 1.545th generation nano: 2.2 For most users, the difference in screen size probably won't be a significant problem. Most iPod nano users need a screen to navigate the menu and watch music, rather than watching photos or videos. For those basic uses, both screen sizes are usually equally good. The fifth-generation iPod nano is controlled by Clickwheel on the device's face. With it, you can lift and lower the volume, play/pause, and move back and forth through the songs without looking at the nano. This makes using nano when exercising easier. It's pretty easy to use with one hand, too. The sixth-generation nano does not have a Clickwheel wheel. Instead, it offers a multitouch screen as the primary way to control a nano, similar to the screen on an iPhone or iPod Touch. This means that you have to look at the screen every time you want to change a song or go from music to listening to radio or other functions. This may be good for some users; others will find it unacceptably clumsy. 3rd, 4th and 5th generation iPod nanos can play video. None of them have very large screens, so most people probably don't play a lot of videos on them, but they can be good for a short clip (or to watch videos recorded on nano, more on this in the next section). The sixth generation iPod nano, on the other hand, can't play video at all. It's probably not many factors, it's for most people, but if you want your nano to have the most a set of possible features, the 5th generation model is superior in this case. Video on iPod Nano 5. Teh Teh Generation iPod nano sports cameras that can record video with a resolution of 640 x 480 pixels at 30 frames per second. It's definitely not HD video, and nano won't replace digital video cameras or cameras built into smartphones because those offer the best quality, but it's a nice bonus feature to have in your music player. The sixth-generation iPod nano removes the video camera so you can't record or play video on it. Last year I started working with 2 online clients, JM and GB, at as much as 350 pounds. Everyone needed my help badly. But it was quickly clear which guy would succeed and which would fail. Can you choose a success story? JM filled out its feedback form immediately. I had to ask GB twice to send it back. JM started to provide daily reviews of his workouts and nutrition, just as I asked. And he kept filling out his plan fitday.com every day for the last month. The last time I heard from GB was 7 days after we started emailing... and he still hasn't started the workout plan yet. It's no surprise that JM lost 7 pounds in one month, and GB, well, who knows how much more weight he gained last month. I don't hear from him anymore... As frustrating as GB's failure was, JM's success underscores the importance of one often overlooked aspect of a successful program. Accountability. Research at Stanford University has shown that accountability to a health care professional increases the success rate of a fat loss program. And I see it all the time with online customers and TT manual users. I encourage people to keep me informed of progress. And who's doing well? People I hear from on a consistent basis. People I can't hear from? Well, they come back a couple of months later and tell me how they fell off the wagon, stopped working, started eating badly, etc. Because they're not accountable to anyone. They set their standards too low. So I know that if I don't hear the shape of you, then more often than not you are in trouble losing fat. Now in an ideal world, we should all have an expert coach report back personally. If you can't do this, you can at least get a turbulence workout and report back to me. Heck, you can even do what good people www.TTMembers.com they did and start posting a workout for me to consider. That's why TT discussion forums are so valuable. You will get almost immediate feedback and support from me as well as other TTmembers. This is the ultimate source of online social support. And then there's the next best thing. Get a workout partner, or group of friends, and they hold you accountable - commit them that you will train and eat according to your goals. Why not take time during March (during school holidays, March madness, or early spring to contact a family member or friend who has the same goals... and you can be accountable to each other. Imagine sitting sitting Watch college basketball and discuss fitness and fat loss. It can be done! Find someone who wants to get fit and spend time with them. Encourage each other. You don't have to go alone, CB PS - are you sabotaging friends, family and workmates? It can be difficult to find support for your fat loss goals. People are either jealous of your results or simply not interested in feeling better and more energetic (although it's hard to see why). And that's what makes the internet fat loss communities so effective... we're all here for the same reason. I'm looking forward to an interview with fitness experts. I am self-employed and work from home. I also have a pretty extensive home gym and workouts at home. As a result, I don't have a large social group for fitness. Pretty much my social fitness group is my wife and I. In this relationship, I'm definitely more active in researching and trying new ideas. I look forward to reading your interviews with fitness professionals as well as discussions on discussion forums. I find this a convenient way to complement my social group and keep my long-term focus. That's what I like about TT. It's not just a book, it's a community. Bob Palermo, www.TTmembers.com Just got TT Membership today and that's exactly what I need, inspiring and educational as well. Literally tons of information. Anyway a big thank you for the help he highly appreciated mike Warrell, Toronto, Ontario This content is created and maintained by a third party and imported to this page to help users provide their email addresses.
