Modern games should be in play with these graphics cards with low settings and resolutions. Random gamers can be happy with these cards. Additional information can be found in our comparison of mobile graphics cards and the relevant list of indicators. i7-7500U: Kaby-Lake-based SoC with two processor cores clocked from 2.7 to 3.5 GHz, HyperThreading and manufactured with an improved 14nm process. More information can be found in our Mobile Processing Comparison. 15.6 15-16 inches is the standard size of the display for laptops and offers the largest selection of products. To find out how good the display is, see our DPI list. 2.3 kg: Usually subnotebooks, ultrabooks and fairly light laptops with a diagonal of 12-16 inches weigh the same. Acer: The company was founded under the name Multitech in Taiwan in 1976 and renamed Acer or Acer Group in 1987. The product range includes, for example, laptops, tablets, smartphones, desktop computers, monitors and televisions. Gateway Inc. and Packard Bell also belong to the Group and sell their own laptops. Despite the fact that in 2008 Acer still occupied the third place in the global laptop market, in 2016 it took 6th place with a market share of 6% after they constantly lost market share. There are dozens of Acer laptop reviews per month, ratings average (according to 2016 data). Gateway, which has its own line of laptops, has also been owned by Acer Group since 2007. 80%: This rating is unconvincing. The laptop is rated below average, it's not really a recommendation to purchase. More information can be found in our guide to buying laptops. Today the best Acer Aspire E 15 E5-576-392H dealsAcer Aspire E 15, 15.6 Full ... The budget of the laptop world is seriously heating up. Gone are the days when buying a laptop on a budget meant dealing with an ultra-slow machine that would die in a week. These days, you can get a solid laptop with a relatively performance and good good All for under \$400.The Acer Aspire E 15 is one such laptop. Sure, it may not be the sleekest machine out there, but with an 8th generation Intel Core i3 chip and a decent battery life, the Aspire E 15 is one of the best laptops under \$500 that you can buy. Acer Aspire E 15 Specs (E5-576-392H) (Credit Image: Acer)CPU: Intel Core i3-8130U RAM: 6GB Display: 15.6-inch, 1920 x 1080 Storage: 1TB HDD Ports: USB-C, USB 2.0, USB 3.0 (3), HDMI, VGA, Ethernet, 3.5mm Battery life: 13.5 hours (rated); 9 Hours (checked) Wireless: 802.11ac Wi-Fi; Bluetooth 4.1 Dimensions: 15 x 10.2 x 1.2 inch Weight: 5 poundsAcer Aspire E 15 price and configurations We tested the \$379 Acer Aspire E 15 configuration (currently \$332 on Amazon), which packs the Intel Core i3-8130U processor, 6GB of RAM and 1TB hard drive. If you need more performance, you can spring for a \$599 configuration that gets you a Core 5-8250U processor, integrated Graphics GeForce MX150, 8GB of RAM, and 256GB of SSD. Acer Aspire E 15 designThe first thing you notice about the Acer Aspire E 15 is its design and it's not exactly sleek. At 15 x 10.2 x 1.2 inches, the Aspire E 15 is a little chunkier than some would like. It's certainly thicker than the Asus Vivobook 15, which comes in at 0.7 inches, and it's pretty heavy too, at 5 pounds. If you're looking for something to take on the go, it's probably worth looking at in a 14-inch, or even 13-inch laptop. Acer Aspire E 15 (Image credit: Tom's Guide) The laptop is largely made of plastic, but it feels strong and doesn't look like it will break with normal use. However, its plastic chassis has a kind of metallic textured finish - making it look a little more elegant than it might otherwise have given a plastic assembly. On the lid, you'll find nothing but the Acer logo on the left side - and it's not a bad look. Acer Aspire E 15 (Image credit: Tom's Guide) Once you open the lid, the device is not all that interesting. There's a full-size keyboard with a platform number on the right, and a touchpad that's to the left of the center. There are relatively thick framings around the display, too, with a webcam at the top. We hope that the framing begin to shrink significantly on laptops in this price range. The webcam is great for basic video chat, but it's not impressive overall. Acer Aspire E 15 (Image credit: Tom's Guide) At the edges, there is a solid selection of ports and even an optical disc that can set the Aspire E 15 apart from other options in this price range for some users. As for the ports, you'll get a USB 2.0 port and a headphone jack on the right, as well as an Ethernet port, two USB 3.0 ports, an HDMI port, a VGA port and a USB-C port on the left. There should be more than enough connectivity for most -- though some might want to USB-C port or two in 2019.Acer Aspire E 15 displayLike design, the Aspire E15 display is a bit boring - but it does the job. The no-touch display comes at 15 inches, with a resolution of 1920 x 1080.Acer Aspire E 15 (Image )Image Tom's Guide) Images are relatively sharp and detailed on the E15 screen, but the colors are muted. It's not a problem for basic web browsing and word processing, but for those who like to watch a lot of movies and do graphic design, you might want to think about getting something different. Muted colors can be because the laptop is only capable of producing 62.3 percent of the sRGB color scheme, which is not great. Other laptops in this price range, and even similarly priced laptops from Acer, like Spin 3, can do better. However, we think most of them will be fine with the display. This is especially true if you are concerned about performance or other similar tasks. The Acer Aspire E 15 keyboard and touchpad keyboard on the Acer Aspire E 15 is quite comfortable - but how it feels will depend on what you're used to. As someone who regularly uses Apple-style keyboards and ultrabooks, the 1.1mm journey on the Aspire E 15 was a let - but some might want more. Acer Aspire E 15 (Image credit: Tom's Guide) Journey aside, the keys felt solid and reactive, and the keyboard interval is good. Turning on a row of pads is good here - and it didn't feel like the keys were too small as a result of the pad number. The Acer Aspire E 15 (Image credit: Tom's Guide) Touchpad on the laptop is OK - but it's certainly nothing compared to the likes of the MacBook, which is considered the best touchpad out there. However, he felt responsive most of the time, and reacted well to gestures like a pinch to a zoom. The touchpad is a good size, too - it sits in at 4.1 x 3 inches, which is plenty of room for most use. Acer Aspire E 15 performanceThe best thing about the Acer Aspire E 15 is its performance. The model we're looking at offers an 8th-generation Intel Core i3-8130U processor, as well as 6GB of RAM and a 1TB hard drive. In this price range, it's a stellar lineup of specifications, for a laptop that comes at \$350.The Aspire E 15 has a pretty stellar line of specifications for a laptop that could be for \$350.On landmarks, the laptop scored 7871 in Geekbench 4.1, which is better than the vast majority of other laptops in this price range. It didn't quite hit the 8543 that Acer Spin 3 got - but spin 3 is \$150 more expensive. More importantly, the Aspire E 15 does well in real-world use. This is despite a ton of viruses dragging it down, most of which Acer built. The laptop took a few seconds to open Firefox, but once it did we were able to open more than a dozen tabs with no sign of it slowing down. While this does get fans going a bit, the laptop still stays cool during the vast majority of our tests, heating up only in more advanced tasks like editing big photos in GIMP at the time like a video played on YouTube. If all you want to do is play a few arcade style or performance-forgiving games like Cuphead or Fortnite, then the Aspire E15 should do the job well (although you want a proper gaming laptop for more demanding titles). Laptop ran Dirt 3 racing game on very very very 56 frames per second, beating most other budget laptops in its price range. Acer Aspire E 15 batteryThe Acer Aspire E 15 has a solid battery life. Last almost 9 hours of continuous web surfing on our battery test, it seriously beats most of the competition in this price range. Tests aside, the laptop almost lasted a full 8 hours of daily use without running out of battery. This use included web surfing, some word processing and even YouTube videos every now and then. It was fairly average use, and probably represents something that many would use the laptop for, so we were impressed when it lasted as long as it was, only to finally run out of juice at 4:17 p.m. after the start of its day at 9am Acer Aspire E 15 is a stellar sub-\$500 laptop option. Sure, it's bulky, and doesn't have the most exciting design or display, but it's a solid performer, with a good keyboard and a great battery life. But is the Aspire E 15 the best option in its price range? Well, that's at least one of them. If you're looking for the best laptop you can get under \$500, then it's also worth considering the Acer Aspire 5, which offers a slightly sleek design and better display. However, the Aspire 5 doesn't quite match the performance of the Aspire E 15 and go with the DVD disc if it's important to you. However, if your budget is less than \$500, you can't go wrong with the Aspire E 15. 15. acer aspire e15 review 2020. acer aspire e15 review philippines. acer aspire e15 review uk. acer aspire e15 review reddit. acer aspire e15 review 2019. acer aspire e15 review notebookcheck. acer aspire e15 review gaming. acer aspire e15 review pcmag
